SUMMARY

Full Stack Software Developer with commercial experience owning features end-to-end — from internal REST APIs and workflow automation to production Vue 3 and Java/Spring web applications. Builds across the full stack using TypeScript, Vue 3, Java, and the Spring ecosystem, backed by relational and NoSQL databases, Docker, Git, Postman, and Playwright. Works in Agile teams with sprint planning and iterative delivery, and has independently maintained a live company website and its online presence since 2020.

EXPERIENCE

Full Stack Software Developer <i>Prozis S.A.</i>	October 2024 – Present <i>Maia, Portugal</i>
- Design and build internal REST APIs and workflow automation tools using TypeScript and Java (Spring), streamlining processes for internal teams. - Develop full-stack internal web applications end-to-end using Vue 3, TypeScript, and Java (Spring) — from UI implementation through backend API integration.	
Full Stack Developer Intern <i>Strongstep — Innovation in Software Quality</i>	February 2024 – July 2024 <i>Porto, Portugal</i>
Redesigned and functionally restructured the Activity Management Form within SCRAIM, Strongstep's software quality management product, improving usability and workflow clarity for end users.	
Web Developer <i>Ciências do Investimento</i>	March 2020 – Present <i>Vila Nova de Gaia, Portugal</i>
- Independently develop and maintain the company website using Liquid, HTML, CSS, JavaScript, and GraphQL, as it was built on Shopify, ensuring accuracy and performance as an ongoing, self-managed responsibility. - Create digital content supporting the company's online presence and brand consistency.
